

Novel Concept

A young aspiring writer decides to live a more exciting life so he'll know more stuff because he's been told a writer has to write what you know. Max Federman goes through a series of unfortunate adventures attempting to sneak into the lives of the rich and famous so he can write a best-selling pot-boiler of a novel. Yeah, it's a bad plan from the get-go as he stows away on a cruise line. Sure, he meets a lovely French girl, but he also has to deal with an annoying US Senator and a serial killer. Knocked off the boat during a struggle, Max is rescued and brought to France, where he gets involved in an undercover caper, attempting to thwart a crime kingpin's plan to open up a new drug pipeline to America. Here he crosses paths with an old school buddy, a sexy moll, and a really cranky banker. Naturally, he winds up in a Turkish prison, and finds himself up against cut throats, murders, and supernatural powers that he may or may not be responsible for. Nevertheless, various prison gangs are vying for control of them. From there, it's just a hop, skip and a jump to the odd little kingdom of Lacertosa. Here, Max winds up on both sides of a coup d'état. Sure he admires the goals of the revolutionaries and is smitten with a pair of twins he's been teamed up with, but he also gets to meet the lovely princess of the country. It's a wide and wacky road trip that breaks the rules (and often the fourth wall) to tell the tale of the unbreakable Max Federman, a young man who attempts to hitchhike his way into the literary realm with only a notebook and stubby pencil, trying to come up with a great American novel concept that contains the stench of hilarity.

IMPRES will further develop four promising novel concepts related to hydro-meteorological risk assessment. In addition to methodological developments, the novel concept for URD cable fault location. Abstract: A new concept for fault location has been developed which uses fault-generated waves to perform both. Since last two decades, the concept

of exergy based design optimization analysis has been widely used for multi-level and multi-disciplinary aerospace system. The increasing demand for renewable fuels and chemicals necessitates the exploration of alternative sources to replace petroleum sources. Biomass has been Novel Concept Designs Attn: Online Department 201 W State Road 434 Ste C Winter Springs, FL 32708 amanda@. Search About Us Privacy Policy (often approving) different from anything known before new, interesting and often seeming slightly strange a novel feature Job-sharing is still a novel concept and it will take a while for employers to get used to it.
